

ABSTRACT OF THE DISCLOSURE

An embedding resin that is caused to assume any base color selected from among black, blue, green, red, orange, yellow, and violet is used for embedding an electronic part in an insulating substrate. The embedding resin preferably contains at least one coloring agent selected from among carbon black, a phthalocyanine-based pigment, an azo pigment, a quinoline-based pigment, an anthraquinone-based pigment, a triphenylmethane-based pigment, and an inorganic oxide. rewritten
